

VIDEO IN PRACTICE

Watch this tutorial to see how to use DryShield during a procedure, from start to finish.

DRYSHIELD

DryShield Isolation System

The autoclavable device simplifies dentistry and increases productivity.

When it comes to isolation, dental professionals want an option that improves productivity in the operatory and makes patients comfortable.

The problems with traditional methods, like a rubber dental dam and cotton roll, are 2-fold. First, it's difficult to contend with saliva and a fighting tongue. Secondly, it's difficult to ensure that patients have a comfortable experience throughout the procedure.

The DryShield Isolation System offers a 3-in-1 solution. It simultaneously retracts the tongue and cheek, has strong suction to keep the mouth dry, and provides patients with a bite block to rest.

"DRYSHIELD IS A BEAUTIFUL SOLUTION THAT FITS THE ECONOMICS AND WORKFLOW OF HOW REAL DENTISTS WORK."

What sets DryShield apart from other isolation devices on the market?

Here are some of the system's unique features:

- DryShield is fully autoclavable, allowing dentists to use it on a variety of procedures and freeing assistants from having to stay at the dentist's side to suction.
- It's made from silicone material to provide a soft, smooth, and flexible mouthpiece that contours comfortably to a patient's mouth. The mouthpiece has multiple holes and passage-ways designed to efficiently direct air and water flow.

- It's easy to install in only a few simple steps with no special equipment required. Dentists who have used DryShield report a 20% to 30% reduction in procedure time.
- There's no need to throw away the mouthpiece after each use. Dentists can try multiple mouthpiece sizes to find an ideal fit, and it only costs \$0.50 per use.

"You get your ROI on DryShield very quickly, especially when you factor in time savings," said Dr. Dzon Nyugen. "DryShield is a beautiful solution that fits the economics and workflow of how real dentists work."
